Sub : Capacity Expansion of Machine Shop.

Magna is glad to announce the commissioning of its new CNC Vertical machining center in its machine shop.

The new CNC vertical machining center model Slim 3 PC is supplied by M/s. MAKINO INDIA. The machine has a axes travel size of 500 X 370 X 400 mm. It is also equipped with automatic tool changer with a 20 live tool magazine. The machine can operate with a rapid traverse of 48,000 mm/min and spindle speed of 80 – 8000 rpm, 50 Nm. This new machining center has a positioning accuracy of ± 0.001 mm.

This facility was formally inaugurated by Mr.Prem G. Mohla, Vice president – Business Development, Hickman

William, USA and a former Director of Magna on 28th November 2009.

This machine will be utilized for meeting the increased volume requirements for high precision automotive parts, which are being manufactured in Magna's green sand molding line.
