News Letter No: 25

February - 2004

Sub:New Post Processing facility

Magna is happy to announce the opening of its new post processing facility. This post processing facility is adjacent to the Magna Foundry. This facility is on 1.5 acres of land with a built up area of 15000 sq. ft. with a working height of 25 ft. It is also equipped with an overhead crane for material movement.

In this post processing unit Magna is establishing all auxiliary activities like Shot Blasting, cleaning and grinding. An expanded Heat Treatment shop with a capacity of 200 MT per month using LPG as fuel is planned. In future a paint shop will also

be established in this facility.

The additional space left in the main building by moving the auxiliary activities will be used as a part of the space for the proposed Furan resin based no-

bake molding system which is under erection.

This 15000 sq. ft. building space was constructed in a record time of 4 months. This building is designed for rainwater harvesting. The harvested rainwater will be used for domestic purposes at Magna.

This post processing facility will help Magna to meet its on time delivery commitments to its customers and caters to the increased volume of castings expected from the new molding line.
