Sub: Installation of Duct Extraction System.

Magna is happy to announce the installation of Duct extraction systems for its Green sand molding line, Furan Fast Loop Line and Melting furnaces.

The Dust Extraction system was supplied by M/S. DISA the world leader in foundry equipments. This is cassette filter type system with a capacity of 45000 Am³ per hour with an maximum emission level of 20 mg per Nm³.

The system installed for Furan Fast Loop line is also supplied by M/S. DISA. This is cassette filter type system with a capacity of 20000 Am³ per hour with an maximum emission level of 20 mg per Nm³ .

The new dust collection systems will enable Magna to meet the National and International guidelines apart from providing clean and comfortable workplace for its employees.
