Sub: Installation of new dust collection system for finishing section.

Magna is glad to announce the installation of its state of the art new dust collection system for its finishing division.

The newly installed dust collector has a capacity of 11,500 Am³/hr of gas volume, 10 – 15 grams / Nm³ of inlet dust load with cassette filter. The guaranteed emission level is 50 mg / Nm³, which is much lower than all National / International standards.

This dust collection system will enable Magna to provide clean work environment to its employees and another milestone in its progress towards ISO 14001 certification.
