October - 2005

Sub: Upgradation of Pressure Testing Facility.

Magna is happy to announce the upgradation of its pressure testing facility to a automatic digital controlled one from manually operated system. This equipment consists of automatic loading and unloading of components, leak detection arrangements and arrangements for setting test pressure and soaking time along with all safety requirements.

With this new pressure testing facility, Magna can do pressure testing with both Air and Water as medium to a pressure upto 15 Bar.

With this facility Magna will be able to do the pressure testing to customer requirements for larger volumes and Magna will be enabled to manufacture and supply products, which meets the PED requirements of the European Union.
